

Problem–Solution Fit Canvas

Project: FitBuddy – AI Fitness Plan Generator using Gemini Models

Problem–Solution Fit Canvas	FitBuddy – AI Fitness Plan Generator
1. CUSTOMER SEGMENT(S) [CS]	• Individuals seeking personalized fitness plans • Users targeting weight loss, muscle gain, or general wellness • Users with different workout intensity preferences
2. PROBLEMS / PAINS + FREQUENCY [PR]	• Difficulty creating a structured workout routine • Generic plans may not match personal goals • Need to update plans when preferences or progress change • Need simple nutrition/recovery guidance
3. TRIGGERS TO ACT [TR]	• Starting a fitness journey • Wanting weight loss or muscle gain • Existing workout plan feels unsuitable • User wants changes such as more cardio or more rest days
4. EMOTIONS BEFORE / AFTER [EM]	Before: Confusion, difficulty planning, lack of personalization. After: Clear 7-day routine, personalized guidance, and an adaptable plan.
5. AVAILABLE SOLUTIONS – PROS & CONS [AS]	Existing options: general workout plans, fitness guidance, and manual planning. Pros: Easily available and familiar. Cons: May not be personalized, may require manual changes, and may not combine workout and nutrition guidance.
6. CUSTOMER LIMITATIONS [CL]	• Different fitness goals and experience levels • Different preferred workout intensities • Need easy web-based interaction • Need practical and concise guidance
7. BEHAVIOR + ITS INTENSITY [BE]	Users provide basic personal details, select a goal and intensity, receive a plan, and may submit feedback to refine it. Engagement increases when the plan adapts to changing needs.
8. CHANNELS OF BEHAVIOR [CH]	ONLINE: Web application, HTML interface, FastAPI API. OFFLINE: Workout activities and nutrition/recovery practices followed by the user.
9. PROBLEM ROOT / CAUSE [RC]	Lack of personalized, structured and continuously adaptable fitness planning based on individual goals, intensity preferences and feedback.
10. YOUR SOLUTION [SL]	FitBuddy is a web-based AI fitness planner using Google Gemini models. It generates a personalized 7-day workout plan, provides nutrition/recovery tips, updates the plan using user feedback, and stores plans/user data for access and monitoring.
