

Code-Layout, Readability and Reusability

Date	29 September 2026	Team ID	_____
Project Name	FitBuddy – AI Fitness Plan Generator using Gemini Models	Maximum Marks	5 Marks

Code-Layout, Readability and Reusability

This document evaluates the quality of the FitBuddy codebase in terms of its structure, readability, and reusability. The checklist follows the supplied template; project-specific evidence is limited to the documented architecture and features.

S.No	Code Quality Parameter	Description	Followed (Yes / No / Partial)	Remarks
1	Consistent Indentation	Uniform spacing/tabs used throughout the code	To be confirmed	Not documented in supplied FitBuddy material.
2	Proper File Structure	Files and folders are logically organized	To be confirmed	Not documented in supplied FitBuddy material.
3	Meaningful Variable Names	Variables reflect their purpose clearly	To be confirmed	Not documented in supplied FitBuddy material.
4	Function / Method Names	Functions are descriptively named	To be confirmed	Not documented in supplied FitBuddy material.
5	Code Comments	Inline and block comments explain logic	To be confirmed	Not documented in supplied FitBuddy material.
6	Modular Design	Code is split into reusable functions/modules	To be confirmed	Architecture uses FastAPI, Gemini, Jinja2 and SQLite; implementation-level modularity is not documented.
7	No Redundant Code	Duplicate or unused code is removed	To be confirmed	Not documented in supplied FitBuddy material.
8	Error Handling	Exceptions and errors are handled gracefully	To be confirmed	Not documented in supplied FitBuddy material.

Reusable Components / Modules

S.No	Component / Module Name	Language / Technology	Where Reused	Reusability Level (High / Medium / Low)
1	FastAPI application / API interface	FastAPI	Local application and /docs API interface	To be confirmed
2	Gemini-based workout plan generation	Gemini Models	Personalized 7-day workout plan generation	To be confirmed
3	Jinja2 frontend/templates	Jinja2	FitBuddy home page and user input flow	To be confirmed
4	SQLite user storage	SQLite	User details and original/updated plans	To be confirmed
5	Nutrition/recovery tip and feedback update	Gemini + application logic	Nutrition/recovery tip and workout-plan update flow	To be confirmed

Overall Code Quality Assessment

Aspect	Rating (1-5)	Comments
Code Layout & Structure	To be completed	Not assessed from supplied material; implementation details required.
Readability	To be completed	Not assessed from supplied material; source code review required.
Reusability	To be completed	Potential reusable technologies/components are documented, but level is not confirmed.
Documentation / Comments	To be completed	Not assessed from supplied material; source code/comments required.
Overall Score	To be completed	Not assessed.

Note: The supplied FitBuddy demonstration document identifies the project as “FitBuddy – AI Fitness Plan Generator using Gemini Models” and documents FastAPI, Gemini, Jinja2, SQLite, the 7-day workout-plan generation flow, feedback update, user storage, and the /docs API interface. Member names, Team ID, participation status, and other items requiring confirmation should be filled in by the team.
